

Tailor-made solutions for the food industry

Safe, efficient, sustainable, worldwide

Your challenge – our answer

For products related to food and water, hygiene, process safety and compliance with standards are crucial.

We provide both standard solutions and stainless steel tanks and systems tailored to your specific requirements. We take hygiene and compliance with standards into account right from the start of the engineering phase, implement them consistently during production, and thus create the basis for minimal cleaning effort, smooth approvals and reliable operation.

Our services for the food industry

Over

170

years of experience

More than

1,550

employees worldwide

128,000m²

of production area, including

25,000m²

indoor space

Production capacity
of up to

400

tanks/year

Product & manufacturing expertise

- Production of storage tanks, buffer tanks, process tanks, pressure vessels, and special-purpose tanks for the food and water industries
- Up to Ø 7.5 m: one-piece factory production possible; beyond that: flexible on-site assembly
- Direct waterside loading

Engineering & technology

- In-house engineering with FEM-based design
- Comprehensive expertise in relevant codes and standards (e.g. EHEDG, DVGW), including documentation that complies with these standards
- Optional equipment tailored to your requirements

Project execution & service

- Highest quality standards throughout the entire project lifecycle
- Short lead times and high delivery reliability
- Global service network

Features and benefits

One-stop project execution

Technical design, manufacturing and installation provided by a single point of contact.

Hygienic design integrated into engineering

For reduced cleaning times, reliable approval processes, and compliant operation in accordance with relevant hygienic standards.

Efficient process integration

Our vessels for food and water applications, together with our experienced team, reduce complexity and streamline your operations.

High-quality manufacturing

Ensures reliable processes, high plant availability and cost-efficient operation over the entire lifecycle.

Large-scale vessel technology

Large vessel volumes create economies of scale and cost-efficient production capacities.

Fast commissioning

One-piece delivery reduces on-site installation effort and enables quicker commissioning.

Future viability

Produced sustainably and with efficient use of resources

The partner for the food and water industry

Ziemann Holvrieka is your partner for certified tank and plant solutions – from design and manufacturing to integration. With global project expertise and turnkey solutions, we ensure quality, compliance and efficiency.
